

ADJUSTABLE PRECISION ZENER SHUNT REGULATOR BL431

DESCRIPTION

The BL431 is a three-terminal adjustable regulator with a guaranteed thermal stability over applicable temperature ranges. The output voltage may be set to any value between V_{REF} (approximately 2.5V) and 36V with two external resistors. This device has typical dynamic output impedance of 0.2Ω . Active output circuitry provides a very sharp turn-on characteristic,

making these devices excellent replacement for zener diodes in many applications.

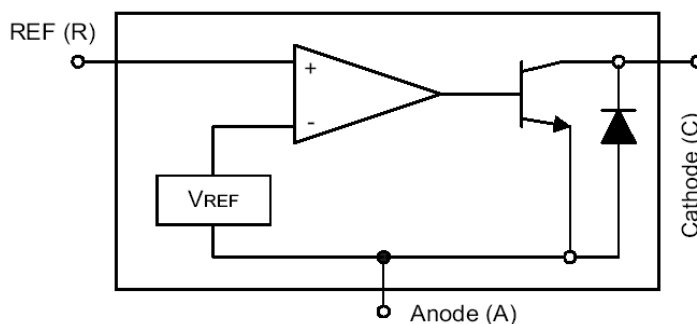

Outline Drawing

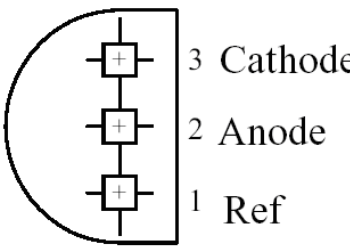

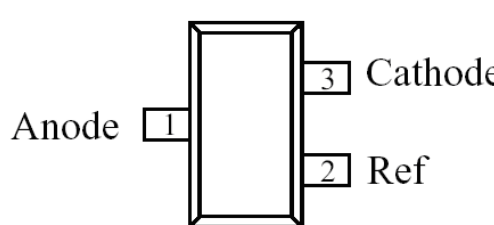

FEATURE

- Programmable output voltage to 36V
- Low dynamic output impedance 0.2Ω typical
- Sink current capability of 1.0mA to 100mA
- Equivalent full-range temperature coefficient of 50ppm/°C typical
- Temperature compensated for operation over full rated operating temperature range
- Low output noise voltage
- Fast turn on response
