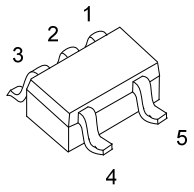
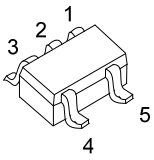
500mA, LOW DROPOUT, LOW NOISE ULTRA-FAST WITH SOFT START CMOS LDO REGULATOR



SOT-25



SOT-353

■ DESCRIPTION

UTC **LR1120**, a 500mA LDO regulator, has very high PSRR and super low dropout voltage especially suitable for wireless and portable applications.

In the field of hand-held wireless devices, board space and battery life are the main concerns of designers and end-users. Because of the low quiescent current and low ESR ceramic capacitors, UTC **LR1120** can satisfy those concerns.

Furthermore, low current consumption in shutdown mode (0.7μA), fast turn-on time (<70μs), high output accuracy, current limiting protection, and high ripple rejection ratio are advantages of UTC **LR1120**.

Notes: 1. Regulation is measured at constant junction temperature by using a 2ms current pulse. Devices are tested for load regulation in the load range from 1mA to 500mA.

2. Quiescent, or ground current, is the difference between input and output currents. It is defined by I_Q = I_{IN} - I_{OUT} under no load condition (I_{OUT} = 0mA). The total current drawn from the supply is the sum of the load current plus the ground pin current.

3. The dropout voltage is defined as V_{IN} -V_{OUT}, which is measured when V_{OUT} is $V_{OUT(NORMAL)}$×98%.
