

U74LVC245

CMOS IC

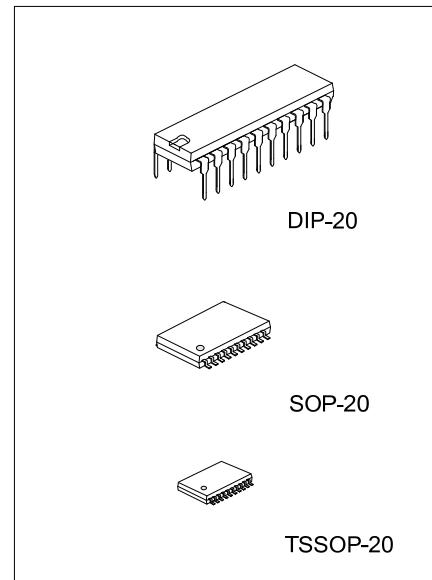

OCTAL BUS TRANSCEIVER WITH 3-STATE OUTPUTS

■ DESCRIPTION

The **U74LVC245** is designed for the communication between data buses asynchronously. While the direction-control(DIR) is high, data transmits from the A bus to the B bus. Data transmits from the B bus to the A bus if DIR is low. The output-enable(\overline{OE}) will isolate the device from the buses when high voltage is applied on it.

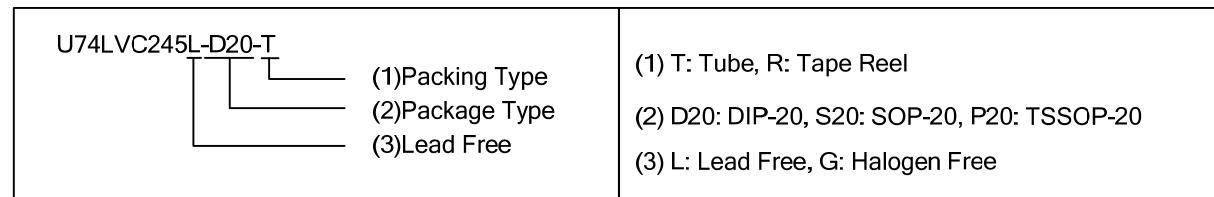

■ FEATURES

- * Operate From 1.65V to 3.6V
- * Input Accept Voltages to 5.5V
- * Partial-Power-Down Mode Operation

■ MARKING INFORMATION

PACKAGE	MARKING
DIP-20/SOP-20/TSSOP-20	<p>The marking diagram shows a top-down view of a package with pin numbers 20 through 11 on the top row and 1 through 10 on the bottom row. In the center, there is a date code 'UTC' followed by three small squares. Below that is the part number 'U74LVC245'. To the right of the date code, arrows point to specific markings: 'Date Code' points to the date code itself, 'L: Lead Free' points to a square symbol, 'G: Halogen Free' points to another square symbol, and 'Lot Code' points to a row of small squares at the bottom.</p>
