14N50

Preliminary

14A, 500V N-CHANNEL POWER MOSFET

DESCRIPTION

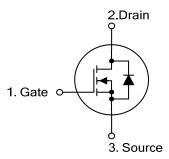

The UTC 14N50 is an N-Channel enhancement mode power MOSFET. The device adopts planar stripe and uses DMOS technology to minimize and provide lower on-state resistance and faster switching speed. It can also withstand high energy pulse under the avalanche and commutation mode conditions.

The UTC 14N50 is ideally suitable for high efficiency switch mode power supply, power factor correction and electronic lamp ballast based on half bridge topology.

FEATURES

- * $R_{DS(ON)} < 0.42\Omega @V_{GS} = 10V$
- * Ultra low gate charge (typical 43nC)
- * Low reverse transfer Capacitance (C_{RSS} = typical 20pF)
- * Fast switching capability
- * Avalanche energy tested
- * Improved dv/dt capability, high ruggedness
